- HTML5 and CSS3
- Django Framework
- Spring Framework
- Scrum Methodology
- GIT

About

I have the dream to positively impact society by doing what I love. Therefore I study Computer Science at UNIPE-João Pessoa and I like programming logic and computer systems. I have knowledge in Java (Spring), Python (Django), TypeScript (Angular) and relational databases (SQL), but I always try to discover new technologies and I feel comfortable in a constant learning environment. My goal, with a client or with the company, is always to aggregate value to both parts.

Education

2021 - Computer Science
UNIPE, João Pessoa - PB, BR.

2017 - Complete English course.
CNA.

2022 - 115 points at Duolingo English test

2021 e 2022 - Certifications by Alura

- Docker: Creating and managing containers
- Spring MVC
- Scrum: Agility in your project

Professional Experience

Fullstack Immersion

Media4All | abril de 2022 – present

My role is to develop, alongside with the team, tech solutions to fulfill the clients necessities, in a personalized way; our major focus is on document management. I code the front end solutions with Angular Framework and also the back end with Java Spring Boot. We use the Mysql Workbench to manage our SQL Database and our development methodology is Scrum.

Extensionist on “Fábrica de Software”

UNIPE | january 2021 – january 2023

2022.2 – Hospitalar system for Hospital Edson Ramalho

I was a Project Manager and guided the team to develop, following the clients requisites, a system to manage the Urgency and Emergency and the patient's hospitalization; this is a project that will be continued to embrace the whole Hospitals necessities. It was an amazing project where **I had the opportunity to put into practice all that I knew about leadership**, including the technical part.

2022.1 – Event management App

I take part in API development using Java Spring Boot for an Event Management App. The project was built with the tech company BEHOH and its purpose is to support the SEBRAE events.

2021.2 – Military Police API

My team, **in which I was leader**, needed to continue the Geolocation API's construction, for the military police, coded with **Django Rest Framework**, applying proposed improvements by the clients.

2021.1 – Event Platform “Sapiens”

A totally personalized website for my university's professors, written in Python Django and hosted in a Debian server. Also had Deployed in Heroku. The SCRUM methodology was applied through all the project **in which I worked as a backend developer**.
